Abstract

As we are exposed to sights, news media, discussions, and our own reflections; it follows, how do we make-sense of our surround World?

Perception View

¶As we viewed and adsorbed other people's opinions and actual facts (true data); therefore, our information analysis begins; as a result, writing a story into our minds that is logical and makes sense to our sense of reasoning.

Look around

¶Keeping our eyes and ears open, absent preconceived embedded thought results, will help with logical thinking as new information presented to senses for assimilation into our logic reasoning analysis.

What's going on today?

¶ Just a short listing of presented subjects that might need more content true data for accurate analysis:

Economic The American *Gross Domestic Product* (“GDP”) published performance values; for example, What is included within the GDP measured output valuation?

- War value added products and services; conversely, when United States Dollars (“USD”) are used to purchase item by U.S. Government; it follows, that these purchases are not contributing to betterment of U.S. General Population because: 1) Government debit is used for purchase; and 2) there is no beneficial return to U.S. Public for improving future business or standard of living conditions within America.
- Private business with non-government customer base; in contrast, the U.S. American consumer, the ones working for wages; not from the industry of finance, would contribute to the American *GDP*; a significant factor, keeping *USDs* returning to benefit U.S. American Consumers and related infrastructure.

War(s) What value, return on investment, does U.S. Government foreign land wars; as a result, kill thousands of humans but here within America we are told to not have guns because the guns kill people; nevertheless, we do endorse killing of humans—adults and children elsewhere. Maybe *GDP* goods and services are destroyed and no longer beneficial to anybody's future—maybe these product and service should be excluded from any *GDP* inclusion?

Finance Industry of Finance (“IoF”), should we have a *GDP* inclusion that include anything resulting form *IoF* money gains or losses because it is tied to a barter exchange method and nothing to do with creation of real tangible goods and services as created by results of human labor?

Infrastructure Why is there little to no money available to maintain or improve or renew American infrastructure?

Homelessness The Reason American People are forced out of dwellings—is it the cost necessary in *USDs* necessary? Why? What causes this money shortage: 1) inflated housing prices; 2) Wages below the U.S. American s t a n d a r d o f l i v i n g wages required; 3) U.S. Government printing money that give appearance products and services are more valuable; however, they are not.

News Media What would news become absent corporate sponsors and government oversight? Maybe some real just the facts reported absent conditioning for audiences?

Artificial Intelligence A over rated Artificial Intelligence (“AI”) as a usable beneficial substitution for human thinking; it follows, until all s e c r e t files. writing, and media are offered to *AI* to digest and retain; as a result, *AI* knowledge and applied logic does’nt exist.

My Thinking Just a few thoughts as result of my thinking.
