

# What happens: print the money then burn it?

J.E.Šherman

May 16, 2024

## Abstract

With so many subjects available for deeper look or evaluation; it follows, I must select only a limited observation. Just thinking: What is the result if money is printed, absent work effort input results; thereafter, used for good and services barter—commerce purchase of war products, services, and government and private labor results; as a result, little value carried forward then returned to Taxpayers but destroyed or only a minimum residual money future benefit; as a result, little barter exchange gain from goods and services trade result into America United States standard of living surround? That's the question that requires analytical thinking.

## 1 Observed State of the Nation Today

¶ Lets just list some observables:

- The U.S. Government is broken bench bankrupt—surviving on debt;
- The war spending continues;
- Banks low on customer cash on-hand;
- Hotels and motels conversion to homeless shelters;
- Small and large businesses are firing employees;
- Small business with commercial store rental payments due—defaulting;

- Consumers are defaulting on auto and home mortgage debt;
- High wages for employees of DoD contractors[Pe120] that don't contribute to improved standard of living within America;
- Human health medicine is becoming more difficult to find in stores and pharmacies;
- Select store food shortages apparent;
- Artificial Intelligence (AI) won't contribute to continued Government revenue or between people barter commerce;
- Inflation—food, insurance cost, housing, fuel, and energy; and
- Health care becoming more difficult to find in reasonable time.

## 2 Is War the root cause of U.S. problems?

¶The U.S. Federal Government permits printing money because it does not have ability earn it or collect sufficient taxes and fees from Taxpayers; therefore, if it can't borrow necessary money, it just credits itself more as required, thus debt. Therefore, Bankrupt!

But what benefit to whom depending how this debt money is spent? Spending upon Taxpayers universal equal Taxpayers benefit or Wars—what is different for return on investment (ROI)?[Pe122]

### 2.1 Spending into U.S. Taxpayers commerce

¶As money is earned by non-AI valued goods and services; as a result, this money is spent into the surrounding standard of living economy barter and exchanged many times before exhausted and complete potential value diminished to zero value.

### 2.2 Spending into U.S. War industry

¶The War industry is not funded directly by Taxpayers because they relize little-to-no-value ROI; as a result, U.S. Government make the decision to throw money at the War industry.

### 2.2.1 problem with War spending

As money is paid into War industry results it has an immediate economic benefit to communities, employees, and supporting businesses; however, once this initial benefit of goods and services produced—such-as: bombs, shells, equipment, vehicles, and ongoing support required to maintain what was allowed to be created; as a result, no more consumer standard-of-living trade or barter value to U.S consumers Taxpayers.

As bombs are exploded, shells are fired, military bases funded to exist, vehicles destroyed; it follows, the War industry is destroying any value that was created once; therefore, all money is “burned” and gone forever; consequently, no future benefit to Taxpayer’s communities or continued barter trade value available between Taxpayers.

## 3 U.S. has allocated money for the wrong results

¶If this same amount of War money past and present was expended for all Taxpayers benefit within American cities and states to maintain, add new, and improve all infrastructure that supports all Taxpayers absent any select group carve-out for money grabs; as a result, U.S. America on American soil would be greatly improved today—but, we did not do that!
